Amendments to the Claims:

This listing of claims will replace all prior listings of the claims in the application:

Listing of Claims:

1. (Currently Amended) A method for ascertaining resource requirements <u>of a print job sent to a printer via a print driver, the method</u> including ~~the steps of~~:

<u>creating a document of the print job with the print driver and reading the print job into memory directly from the print driver;</u>

sampling a task requiring a consumable resource to provide a sample <u>by overlaying a sample window over a portion of the document and providing low resolution level analysis data with respect to resource requirements of the task;</u>

analyzing the sample <u>window and low resolution level analysis</u> of the task with respect to resource requirements thereof and providing task sample requirement data in response thereto; and

ascertaining the resource requirements of the task based on the task sample requirement data.

2. (Original) The invention of Claim 1 wherein the task includes printing an image on a document.

3. (Currently Amended) The invention of Claim 2 wherein the <u>memory of the</u> step of sampling ~~includes the step of reading a file containing the document into a~~ <u>is a computer readable</u> buffer.

4. (Original) The invention of Claim 3 wherein the step of sampling includes the step of formatting the file in the buffer in print format.

5. (Currently Amended) The invention of Claim 4 wherein the step of sampling includes the step of overlaying a sample window over the print formatted file in the buffer, the window having an area ~~of 1/x times~~ smaller than the area of the document.

4

6. (Currently Amended) The invention of Claim 5 wherein the step of analyzing includes ~~the step of~~ performing a Raster Image Processing analysis within the sample window to determine window coverage.

7. (Currently Amended) The invention of Claim 6 wherein the step of ascertaining the resource requirements of the task includes the step of multiplying the window coverage by ~~x~~ <u>a factor related to a size of the smaller area</u> to determine the page coverage of the document.

8. (Original) The invention of Claim 7 wherein the step of ascertaining the resource requirements of the task includes the step of multiplying the page coverage by a number of pages in the task to determine job requirements.

9. (Original) The invention of Claim 8 including the step of comparing the resource requirements of the task to data relating to an availability of the resources.

10. (Original) The invention of Claim 9 further including the step of executing the task if sufficient resources are available.

11. (Original) The invention of Claim 10 further including the step of providing a message if sufficient resources are not available.

12. (Original) The invention of Claim 11 further including the step of securing additional resources if sufficient resources are not available.

13. (Currently Amended) A method for ascertaining resource requirements <u>of a print job</u> sent to a printer via <u>a print driver, the method</u> including ~~the steps of~~:

<u>creating a document of the print job with the print driver and reading the print job into memory directly from the print driver;</u>

sampling a task requiring a consumable resource ~~to provide~~ <u>by overlaying a sample window over a portion of the document and providing</u> low resolution level analysis data with respect to resource requirements of the task<u>;</u> and

5

comparing the <u>sample window and the</u> low level analysis data to data relating to an availability of the resource and providing an output with response thereto.

14. (Original) The invention of Claim 13 wherein the low resolution level analysis is performed at fifty dots per square inch.

15. (Original) The invention of Claim 13 further including the step of providing actual data relating to an amount of resources required by the task.

16. (Original) The invention of Claim 15 further including the step of comparing the actual data to the low level analysis data and generating correction data in response thereto.

17. (Original) The invention of Claim 16 further including the step of adjusting the task sampling step in response to the correction data.

18. (Original) The invention of Claim 17 wherein the task includes printing an image on a document.

19. (Original) The invention of Claim 18 wherein the task includes printing plural images on plural documents.

20. (Original) The invention of Claim 19 wherein the images include text.

21. (Original) The invention of Claim 13 wherein the step of sampling includes the step of performing a Raster Image Processing analysis.

22. (Original) The invention of Claim 13 wherein the step of sampling includes the step of executing the task if sufficient resources are available.

23. (Original) The invention of Claim 22 further including the step of providing a message if sufficient resources are not available.

6

24. (Original) The invention of Claim 22 further including the step of securing additional resources if sufficient resources are not available.

25. (Currently Amended) A method for ascertaining resource requirements <u>of a print job sent to a printer via a print driver, the method</u> including <s>the steps of</s>:

    <u>creating a document of the print job with the print driver and reading the print job into memory directly from the print driver;</u>

    overlaying a window over a document print job in a computer readable medium to provide a sample;

    providing low level resolution analysis data with respect to consumable resource requirements of the sample; and

    ascertaining the resource requirements of the document based on the sample.

26. (Currently Amended) A program <u>stored on a computer readable medium</u> for ascertaining resource requirements <u>of a print job received by a print driver</u> <s>stored on a computer readable medium</s> including:

    <u>code for creating a document of the print job with the print driver and reading the print job into memory directly from the print driver;</u>

    code for sampling a task requiring a consumable resource to provide a sample <u>by overlaying a sample window over a portion of the document and providing low resolution level analysis data with respect to resource requirements of the task;</u>

    code for analyzing the sample <u>window and low resolution level analysis</u> of the task with respect to resource requirements thereof and providing task sample requirement data in response thereto; and

    code for ascertaining the resource requirements of the task based on the task sample requirement data.

27. (Original) The invention of Claim 26 wherein the task includes printing an image on a document.

28. (Original) The invention of Claim 27 wherein the code for sampling includes code for reading a file containing the document into a buffer.

7

29. (Currently Amended) The invention of Claim 27 wherein the <u>memory of</u> <u>the</u> code for sampling <s>includes code for formatting the file in the</s> <u>is a computer</u> <u>readable</u> buffer <s>in print format</s>.

30. (Currently Amended) The invention of Claim 29 wherein the code for sampling includes code for overlaying a sample window over the print formatted file in the buffer, the window having an area <s>of 1/x times</s> <u>smaller than</u> the area of the document.

31. (Original) The invention of Claim 30 wherein the code for analyzing includes code for performing a Raster Image Processing analysis within the sample window to determine window coverage.

32. (Currently Amended) The invention of Claim 31 wherein the code for ascertaining the resource requirements of the task includes code for multiplying the window coverage by <s>x</s> <u>a factor related to a size of the smaller area</u> to determine the page coverage of the document.

33. (Original) The invention of Claim 32 wherein the code for ascertaining the resource requirements of the task includes code for multiplying the page coverage by a number of pages in the task to determine job requirements.

34. (Currently Amended) A program <u>stored on a computer readable medium</u> for ascertaining resource requirements <u>of a print job sent to a printer via a print driver</u> <s>stored on a computer readable medium</s> including:
    <u>code for creating a document of the print job with the print driver and</u> <u>reading the print job into memory directly from the print driver;</u>
    code for sampling a task requiring a consumable resource <s>to provide</s> <u>by overlaying a sample window over a portion of the document and providing</u> low resolution level analysis data with respect to resource requirements of the task<u>;</u> and
    code for comparing the <u>sample window and the</u> low level analysis data to data relating to an availability of the resource and providing an output with response thereto.

8

35. (Original) The invention of Claim 34 further including code for providing actual data relating to an amount of resources required by the task.

36. (Original) The invention of Claim 35 further including code for comparing the actual data to the low level analysis data and generating correction data in response thereto.

37. (Original) The invention of Claim 36 further including code for adjusting the code for sampling a task in response to the correction data.

38. (Currently Amended) A program for ascertaining resource requirements stored on a computer readable medium including:

 code for creating a document of the print job with the print driver and reading the print job into memory directly from the print driver;

 code for overlaying a window over a portion of the document print job in a computer readable medium to provide a sample;

 code for providing low level resolution analysis data with respect to consumable resource requirements of the sample; and

 code for ascertaining the resource requirements of the document based on the sample.
